DETAILED ACTION***Allowable Subject Matter***

Claims 1-6, 8-12, 14-17, and 19 are allowed. The following is an examiner's statement of reasons for allowance: The claims are allowable over the prior art of record because the teachings of the references taken as a whole do not teach or render obvious the combination set forth, including that of a method for latching a door by moving a handle axially to remove a locking portion of the handle from an extension slot in a handle latch, and pivoting the handle to remove the locking portion from an extension passage of the handle latch, as in claims 1 and 8, and radially biasing the handle radially so that the locking portion is retained in the handle latch extension passage, as in claim 14.

The closest prior art of record, U.S. Patent Number 3,583,738 to Uphoff, discloses a latch pivotally retaining a handle, attaching a handle latch to a mounting surface adjacent a door, moving the handle axially to remove it from an extension slot in the handle latch, and pivoting the handle to unlatch the door. However, Uphoff does not disclose the handle latch having both an extension slot and an extension passage, as well as biasing the handle such that the handle is retained in the handle latch.

U.S. Patent Number 2,529,009 to Foss discloses a latch having a handle that is biased so that the latching portion is retained in a handle latch, where the handle moves axially to remove it from a portion of the handle latch, and pivoted to disengage the handle latch. However, Foss does not disclose the handle latch having an extension slot leading to an extension passage.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to further show the state of the art with respect to latching assemblies with rigid operating means:

U.S. Patent Number 6,003,908 to King, U.S. Patent Number 5,275,029 to Myers, U.S. Patent Number 4,494,781 to Lafosse.
